Agenda

- What is Regular Expression?
- Regular Expression Syntax
- Special Characters
- Examples
- Regular Expressions in PHP

What is Regular Expression?

- A regular expression is special text string for describing a search pattern
- Used to search/edit or manipulate text and data
- Used by many text editors to manipulate the text
- Many programming languages support regular expressions for string manipulation
- Combination of alpha-numeric characters and match characters
- The patterns described by regular expressions are used to search strings, extract desired parts of strings, and to do search and replace operations

What is Regular Expression?

Example:

"I am John, my age is 26. I work with Cybage and my mobile number is 9800123456. I live in Pune."

Select phone number from the above text?

Regular Expression Syntax

- Start and End characters
- Escape Characters
- Special Characters
- Valid Patterns:

```
/<\/\w+>/
|(\d{3})-\d+|Sm
/^(?i)php[34]/
{^\s+(\s+)?$}
```

Invalid Patterns:

```
/href='(.*)' - missing ending delimiter
/\w+\s*\w+/J - unknown modifier 'J'
1-\d3-\d3-\d4| - missing starting delimiter
```

Special Characters (Match characters)

Char	Meaning	Example
٨	Match the beginning of the line	^cyb = cybage, cyberage, cybercity etc. (netcyber)
\$	Match the end of the line (or before newline at the end)	<pre>hood\$ = childhood, neighborhood, brotherhood etc (mounthoodArea)</pre>
•	Matches any character except newline	c.t = Cat, Cot, Cut
*	match 0 or more times	<pre>go*gle = matches ggle, gogle, google, google etc</pre>
+	match 1 or more times	<pre>go+gle = gogle, google, gooogle, etc. (but not ggle).</pre>
?	match 0 or 1 times	<pre>colou?r = matches both 'color' and 'colour'</pre>
	Alternative	<pre>a b = matches either 'a' or 'b'</pre>
()	Grouping	(ab) = ab
[]	Character class	[abc] = a , b or c
{}	Repetition modifier	<pre>ab{4} = abbbb (b should be 4 times) a{3,5} = aaa, aaaa or aaaaa</pre>
\	Quote next character (Escape)	\d, \s, a\+b = matches "a+b"
-	Range Operator	0-9, a-z, A-Z, k-p etc

Special Characters (predefined character class)

Char	Meaning	Example
\d	[0-9]	matches any digit character
\ D	[^0-9]	matches any non-digit character
\s	$[\t \n\x0B\f\r]$	matches any whitespace character (space, tab, newline)
\\$	[^\s]	A non-whitespace character
\W	[a-zA-Z_0-9]	A word character
\W	[^\w]	A non-word character

Range

[a-z] - matches any character between a to z

[A-Z] - matches any character between A to Z

[0-9] - matches any character between 0 to 9

Repeatation

a* - zero or more a's

a+ - one or more a's

a? - zero or one a's (i.e., optional a)

a{m} - exactly m number of a's

a{m,} - at least m number of a's

a{m,n} - at least m but at most n a's

Example:

"My Phone Number is 9890012345."

$$[0-9]+ or \d+$$

$$[0-9]{10}$$
 or $d{10}$

"My Phone Number is 9890012345. customer care 121."

Examples

How to match IP Addresses?

```
ex. 192.168.6.82, 255.255.255.0, 10.47.92.1 \d+ \d+\. (escape '.', Since '.' is a special character) \d+\.\d+\.\d+\.\d+
```

The above Regular expression can match 12345.345.987.12345. This is not a valid IP address.

Improved Regular Expression:

```
\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{1,3}\.\d{
```

How to match a date?

```
ex. 11-05-2007 \d{1,2}\-\d{1,2}\-\d{4}
```

Examples

How to match a floating point number?

```
ex. 0.172, 3.41, 100, -34.67, +45, .86
[-+]
[-+]?
[-+]?[0-9]*
[-+]?[0-9]*\.?[0-9]*
```

How to match an email address?
ex. yogeshni@cybage.com, abc@yahoo.com
\w+
\w+@
\w+@\w+\.[a-z]{3}

Examples

"Visit W3Schools" /w3schools/

"Visit W3Schools" /w3schools/i

"Is this all there is?" /is/g

"Is this all there is?" /is/gi

Regular Expressions in PHP (PCRE)

 preg_grep: Return array entries that match the pattern array preg_grep(string pattern, array input)

```
// return all array elements containing floating point numbers $fl_array = preg_grep("/^(\d+)?\.\d+$/", $array);
```

 preg_match: Perform a regular expression match int preg_match(string pattern, string subject [, array &matches])

```
// The "i" after the pattern delimiter indicates a case-insensitive search
if (preg_match("/php/i", "PHP is the web scripting language of choice.")) {
    echo "A match was found.";
} else {
    echo "A match was not found.";
}
```

 preg_match_all: Perform a global regular expression match int preg_match_all(string pattern, string subject [, array &matches])

Regular Expressions in PHP (PCRE)

 preg_quote: Quote regular expression characters string preg_quote(string str [, string delimiter])

```
$keywords = '$40 for a g3/400';
$keywords = preg_quote($keywords, '/');
echo $keywords; // returns \$40 for a g3\/400
```

preg_replace: Perform a regular expression search and replace
 mixed preg_replace (mixed pattern, mixed replacement, mixed
 subject [, int limit [, int &count]])

```
$string = 'April 15, 2003';
$pattern = '/(\w+) (\d+), (\d+)/i';
$replacement = '${1}1,$3';
echo preg_replace($pattern, $replacement, $string);
```

 preg_split: Split string by a regular expression array preg_split(string pattern, string subject)

```
//split the phrase by any number of commas or space charas, which include " ", \r, \t, \n $keywords = preg_split("/[\s,]+/", "hypertext language, programming");
```
